HexPly® M81
135°C - 180°C curing epoxy matrix

Description
HexPly® M81 is a high performance tough epoxy matrix for use in industrial applications requiring good impact resistance and damage tolerance, such as the automotive industry. HexPly® M81 is based on the highly successful HexPly® 8552 toughened epoxy resin system, used widely around the world for the manufacture of aircraft structures. Non-aerospace customers now have the opportunity to benefit from the excellent performance of this resin system presented with reinforcements specially adapted for industrial markets.

Benefits and Features
- Toughened epoxy matrix with excellent mechanical properties
- Elevated temperature performance (Tg up to 200°C)
- Versatile cure cycle (from 135°C to 180°C)
- Available on various reinforcements
- Excellent drape and tack

Resin Matrix Properties

Rheology (EN 6043-A, 2°C/min)  Gel time (hot plate)

- Colour: Yellow
- Density: 1,30 g/cm³
- Maximum Glass Transition Temperature, T_g onset dry: 200°C
- Maximum Glass Transition Temperature after ageing, T_g onset wet: 140°C
Curing Conditions
HexPly® M81 is a flexible curing system and can be cured at temperatures from 135°C to 180°C.

The recommended cure is 3 hours at 135°C. Alternative cure cycles can be used:

<table>

*Tg Temperature can be slightly different depending on the fabric weight. The lowest values are here above presented.

Curing Cycle for monolithic parts
Typical cure cycle for monolithic parts
1. Apply the full vacuum (1 bar)
2. Apply 7 bars gauge autoclave pressure
3. Heat at 1-3°C/min to 135°C
4. Hold at 135°C for 180 minutes
5. Cool at 2-5°C/minute
6. Vent autoclave pressure when the part reaches 60°C or below

For thick parts intermediary dwell 30 min. at 110°C can be added to limit exotherm and improve health of the part.

Heat-up rates are dependent on component thickness, eg, slow heat-up rates should be used for thicker components and large tools. Accurate temperature measurements of the component should be made during the cure cycles by using thermocouples.

Performance testing should accompany alternative cure cycles to ensure suitability for the particular application.

Cured Mechanical Properties (Examples only. For the wider prepreg range contact Hexcel)

Mechanical Properties are based on 135°C cure for 120 minutes, at 6 bar pressure and -0.95 bar vacuum + post curing 60 minutes at 170°C.

Data is the result from several tests on autoclave cured laminates. Some of the values achieved will have been higher, and some lower than the figure quoted. These are nominal values.

Prepreg Storage Life
1 Shelf Life: 12 months at -18°C/0°F (from date of manufacture).
The maximum storage life for HexPly® prepreg, when stored continuously, in a sealed moisture-proof bag, at -18°C/0°F or 5°C/41°F. To accurately establish the exact expiry date, consult the box label.

2 Out Life: 14 days at room temperature (25°C max).
The maximum accumulated time allowed at room temperature between removal from the freezer and cure.

3 Tack Life: 10 days (depending of the reinforcements) at room temperature (25°C max).
The time, at room temperature, during which prepreg retains enough tack for easy component lay-up.

Storage Conditions
HexPly® M81 prepregs should be stored as received in a cool dry place or in a refrigerator. After removal from refrigerator storage, prepreg should be allowed to reach room temperature before opening the polythene bag, thus preventing condensation (a full reel in its packaging can take up to 48 hours).

Precautions For Use
The usual precautions when handling uncured synthetic resins and fine fibrous materials should be observed, and a Safety Data Sheet is available for this product. The use of clean disposable inert gloves provides protection for the operator and avoids contamination of material and components.

For more information
Hexcel is a leading worldwide supplier of composite materials to aerospace and industrial markets. Our comprehensive range includes:

- HexTow® carbon fibers
- HexForce® reinforcements
- HexPly® prepregs
- HexMC® molding compounds
- HexFlow® RTM resins
- Redux® adhesives
- HexTool® tooling materials
- HexWeb® honeycombs
- Acousti-Cap® sound attenuating honeycomb
- Engineered core
- Engineered products
